# Canon ScanFront 400 Integration for Laserfiche®

ABOUT

CDI's ScanFront/Laserfiche integration allows users to scan documents from a Canon ScanFront 400 scanner directly into selected folders within Laserfiche.

Once configured, users select a created profile from the scanner, specify a document path or use a preset path, and enter the document metadata. The document and metadata is automatically scanned and sent to the selected location within the Laserfiche Repository.

Entering metadata on a Canon ScanFront 400

The ability to create custom profiles using the ScanFront integration is an added benefit. These profiles include Laserfiche login options, along with many document and scanner settings, making this integration extremely user-friendly.

FEATURES

The ScanFront Integration for Laserfiche from CDI provides the following features:

- ✓ **Automatic scanning of documents into any selected Laserfiche folder**

- ✓ **Custom scanning profiles**

- ✓ **Apply metadata to documents prior to scanning**

- ✓ **Includes 7 workflow designer activities**
